### THIS WEEK!

#### Noremat Professional Reach (Boom) Mowers

Noremat Internationally supports an exclusive network of importers chosen for their professionalism, loyalty to the product and first-rate level of service. Stocker-Crew is proud to be Noremat's representative for Australia.

Stocker-Crew have been displaying and demonstrating the Noremat products for over 2 years and have received great support and interest from professional users and Government departments Australia wide.

Noremat reach mowers are now being used in Tasmania, Victoria, New South Wales, Queensland, South Australia and Western Australia.

Stocker-Crew has achieved this great sales success through providing a superior product (Noremat), excellent sales support, personal service and in most cases same day parts backup.

Noremat's unique patented Visiobra concept gives perfect vision for the operator with the road and the mowing head in the same field of vision; the telescopic section giving perfect control when the mower head extension needs adjustment.

If you are in the market for a Professional Reach (Boom) Mower then do yourself a favour and at least take the time to look at the strength, power, safety features and ease of operation differences between Noremat and the others on the market. Why replace your existing professional reach mower with a new model of the same, with the same old problems.

#### Noremat Optima Range

Noremat's Optima is the first range of reach (boom) mowers within the 5 to 6m range to adopt 100% heavy duty construction from the main frame to the arms. The range is designed for reliability, using the most innovative technology such as the Visiobra concept, and has the flexibility required to ensure effective, top quality mowing and verge maintenance.

#### Noremat Magistra Range

The new generation Magistra is designed to perform even the most intensive verge maintenance work. Articulation technology for the Magistra range is based on that found in heavier construction and industrial applications to ensure safe operation in all conditions. There is a wide range of reaches from

5.50m to 8.30m, a wide range of configurations; offset arm, Visiobra or telescopic arm to ensure that there is a model ideally suited to each application. Robust and efficient, the Magistra range provides multi-purpose equipment for professional users.
