

B20

Sturdy PTO driven blower

Turbine and housing are made of durable sheet steel. The turbine is designed according to the 'forced air guidance' principle. This principle not only generates lots of air, but also a high pressure. The blower can fit several PTO speeds and directions. Thence this blower can also be mounted onto the front of a tractor.

Several options are available as terrain-adapting undercarriage, turnable air outlet and an air outlet for cleaning small roads.

Specifications	B20
Driving	
PTO	540/1000 RPM (counter-) clockwise in propelled direction when rear or front mounted
PTO-shaft	Standard without free wheel
Minimum PTO power	20,0/14,5 HP/kW
Frame	
Construction frame	Sheet steel with steel box profile
3-point linkage	Category IN, I and II rear or front mounted
Terrain-adapting undercarriage	Option
Parking stand	Support legs
Turbine	
Construction turbine	Sheet steel, single sided closed
Construction turbine housing	Sheet steel
Intake	Single sided
Air control	Several air outlets available
Dimensions	
Weight	105 kg
Length	58 cm
Width	94 cm
Height	81 cm
